WORLDWIDE INDUSTRIAL SERVICES SINCE 1900

## Emergency needs experience: Making rescue work safer

### **Industrial Fire Fighting Vehicles**

Counteracting specific dangers arising from areas having high risk of fire such as petrochemical industries, power and nuclear plants, ports, etc. All types of extinguishing agents: water, foam and powder.

### **Airport Fire Fighting Vehicles**

Rapid intervention, high extinguishing capacity, special chassis (foam crash tenders) and rescue stairs vehicles. Fast and safe in any case of a hazardous situation due to innovative technology. All vehicles respect ICAO & NFPA standards.

### **Municipal Fire Fighting Vehicles**

Intervention in areas of difficult access (such as historical centres, congested traffic zones, mountainous areas) and in places where fire fighting intervention requires water and/or foam of superior capacities.

### **Rescue Vehicles**

Multi-purpose vehicles primarily designed for technical rescue situations. Special attention is given to the equipment location inside the superstructure in order to guarantee as much efficiency as possible.

### **Forest Fire Fighting Vehicles**

Intervention in forests, woods and rural areas. Top off-road performance, manoeuvrability, ability to climb, small dimensions and low weight. Outstanding extinguishing capacity.

**And many more special vehicles can be provided.**
